

## Two Buildings. Same Challenge. One Solution for Healthy Air.

In late July 2025, wildfire smoke from Canada blanketed Chicagoland, driving outdoor air quality to some of the worst levels in the world and triggering an Air Pollution Action Day across Northern Illinois. This is home to both the Fellowes Itasca headquarters and the Fellowes Design & Experience Center, each outfitted with Array networked indoor air purifiers and monitors.

July 31, 2025 Chicagoland Air Quality Map

### Fast Response Through Real-Time Monitoring in Older Building

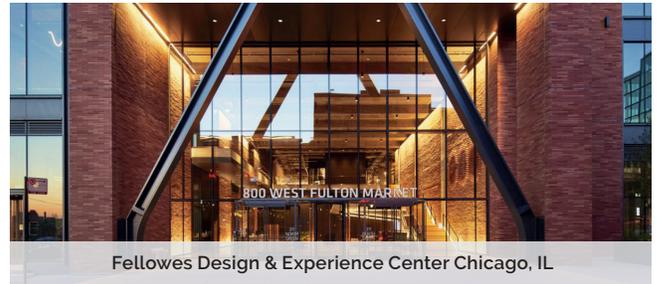

Fellowes HQ Itasca, IL

#### Event Overview:

- Staff was actively monitoring AQI.
- Building management took action at 12:30pm and closed dampers to limit smoke intrusion.
- Purifiers ramped up, restoring to indoor air quality by 2:00pm.

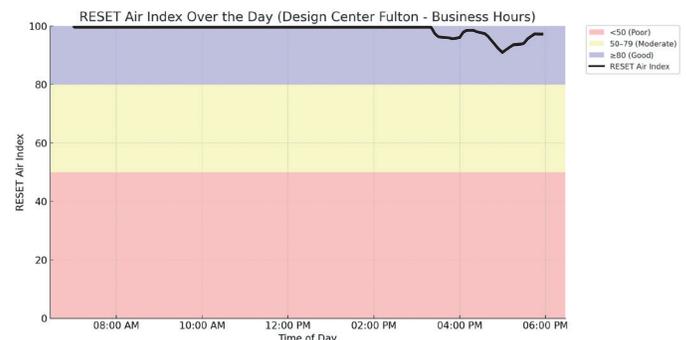

### Proactive Protection in a WELL Certified™ Silver Space

Fellowes Design & Experience Center Chicago, IL

#### Event Overview:

- Automated HVAC systems already limiting wildfire smoke intrusion.
- Array IAQ purification system automatically maintained indoor air quality during occupied hours despite the Unhealthy outdoor air conditions.

Building age doesn't determine air quality. The way it's managed makes the difference.

**Monitor. Mitigate. Manage. Fellowes Array.**
